

Senior Addendum:

You may create a simpler site that only consists of 4 pages. Your home page will show 5 items for sale and will be similar to the category page described in the full instructions. Your other pages will be cart.html, checkout.html, and thanks.html.

After downloading the template files, delete the index.html. Then rename the category page index.html before you get started. You can also delete the navigation div from each HTML page.

Follow the full instructions with the understanding that directions to the category page actually apply to your home page. The site_map_seniors.jpg image should help you understand the overall structure of your site. If directions are unclear, compare your site map to that for underclassmen.

This will count as a single project grade for seniors.

Site Map (simplified):
